

# DBU your World and EnterpriseOne Database!

World and EnterpriseOne Users, its time to team it up with DBU, database utility. Thousands of Quest members do! DBU allows users to view and update any EnterpriseOne / World file instantly without using time consuming queries, DFU or additional programming.

Instantly access information on logicals, enable security and audit logs or view and update multiple files. Use our traditional green-screen interface or GUI. It's the most complete database tool available!

Green Screen

### *DBU makes changing date fields easy!*

- ◆ DBU will now convert the 'Data Item Class.....DATEW' fields to an editable date in the \*USA format. DBU will also convert the date back to the original format when the user makes a change to the date.

### *DBU makes it easier to read and update JDE data.*

- ◆ DBU will extract the number of decimal positions assigned to each numeric field from the data dictionary as well as pull in the text and column headings. DBU will allow the user to edit the numeric field length attributes.

### *DBU views can be used over and over again.*

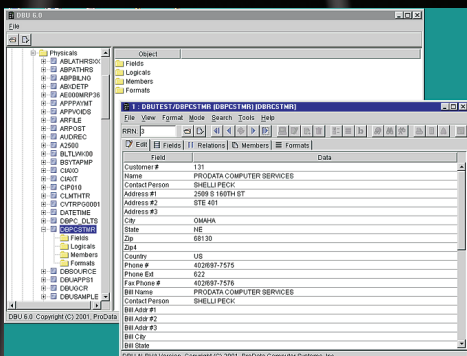

- ◆ DBU Applications can be created so the next time the file is accessed using the application, the numeric fields will be displayed using the proper length and decimal positions and the field text and column headings info will also be included.

Current DBU customers upgrade to EnterpriseOne/World version for only \$495! New licenses \$2990.

## DBU Audit

**DBU Audit** works by journaling all adds, changes, deletes, reactivation of deleted records and viewing of sensitive data made by users through DBU to a standalone IBM journal. DBU Audit goes beyond the base DBU change logs by storing the data in journals rather than spooled files. This simplifies the ability to track and report on changes to your database files for regulatory compliance management or internal control requirements.
