

Success

5 steps to

"You guys have become an industry standard."

Dusty Lela,
GameStop

"I have used ProData products for years. They provide quick, easy development tools and access to iSeries 400 data which allows me to make decisions, improve processes and increases productivity."

Joan Steffes,
Omnium Worldwide

DBU, the 'original' database utility has moved beyond it's legacy. Now you can access **IBM i** data AND any data on any platform through the same interface! Green-screen, GUI or WDS*c* versions all under one umbrella. It just keeps getting better and better. DBU "plugs-in" to any Eclipse-based IDE, making it easy for developers to work in the latest development environment. DBU allows users to view and update any file instantly without time consuming queries, DFU or programming.

DBU Audit, is a plug-in that works with DBU to give administrators control over their databases by allowing them to track and monitor any modifications that have been made to any **IBM i** or remote database using DBU or DBU RDB. DBU Audit works by journaling all adds, changes, deletes, reactivation of deleted records and viewing of sensitive data made by users through DBU or DBU RDB to a standalone IBM journal.

DBU RDB supports access to MySQL, Microsoft Access and SQL Server, Oracle, DB2 database and others. Use DBU to analyze data on all your servers. One single tool, one interface across multiple platforms opens your organization's remote pockets of information to those who need it. Create DBU applications for users to automatically access remote data. Powerful DBU functionality can be deployed for cross-platform access to data. DBU RDB does the work for you!

RDB Connect, provides direct access to remote databases from all high-level languages on the System **i**. It enables record level I/O as well as the import/export of remote data for use in batch or interactive programs. RDB Connect supports access to MySQL, Microsoft Access and SQL Server, Oracle, DB2 database and others.

SQL/Pro provides a cost effective structured query language with an extensive report formatter. It can save an organization time and money by reducing workloads and speeding up information retrieval. SQL/Pro is the powerful alternative to SQL/400 and custom report programming on the **IBM i**!

ProData's IBM i Utilities include CvtRPGIV, ProTools, RDR (Retrieve Deleted Records). CvtRPGIV converts old RPG source to RPGIV and provides RPG Templates to facilitate further learning. ProTools features eighteen system utilities with the source code included! RDR retrieves deleted records from any physical file on the **IBM i**.
