

Install DBU Server Version in IFS

Download War File

- Go to our website and download the latest DBU Server war file [DBU V3.1.6](#)
- If your DBU Server is running, stop it by using IBMi Command DBUSVREND
- Back up your current DBU.war file located in IFS /prodata/dbusvr/server/webapps/ directory.
- Delete the old DBU directory and DBU.war file along with any old logs in this directory /prodata/dbusvr/server/logs

Transfer your file to IFS

- Transfer the new war file V3.1.6 to IFS using your preferred method to the same location above.
- Rename the file to DBU.war
- Delete the old DBU directory and any old logs in this directory /prodata/dbusvr/server/logs

Start the new DBU Server version

- Use IBMi Command DBUSVRRST to start the DBU Server
- Give it a few minutes and check your IP address or DSN name, the version can be seen in the upper right-hand corner.

✓ You're DONE, start using DBUWeb
